

## **JAG SECURITY SERVICES**

**JAG Security in New Zealand uses Videofied to protect unoccupied Government housing sites in conjunction with physical guards. Within 20 minutes of deploying Videofied as 'virtual electronic guards', JAG had a video verified intrusion that resulted in an arrest.**

A patrolman was given the Videofied system with 2 P-cams to install. The control panel and keypad were to be put in the man hole out of sight and the P-cams to be located close to entry points.

Guard arrived on-site, put up his P-cams and entered 999999 on the keypad, requesting a remote maintenance request. The dispatch received the request via TMT over the Vodafone Network and programmed the panel in under 10 minutes. Dispatch remotely armed the panel and requested the guard to activate the alarm to test the video signals. Signals were received but dispatch wanted to adjust cameras slightly so the guard moved them and dispatch checked position using the still picture imaging software in Frontel Software. Once dispatch he was happy and then re-armed the system and the guard left site.

**Within 20 minutes of installation** we had some live action. I have attached a couple of the videos from the Activations.

First alarm the guard arrived to see 3 male youths get the shock of their lives and escape out the back door and over the rear fence leaving the oven on with 2 knives in the element. He also found a brand new hoody with a full pack of smokes in it (unfortunately he doesn't smoke).

The second alarm appears to be a single male who is looking for something and I'm guessing it would have been his hoody. Second activation the offender was caught on-site! 1x K-9 (arrest) for Videofied in NZ!

This is a brilliant system and it is perfect for situations just like this and many, many more!

For any further information please do not hesitate to give me a call.
