

## Roden Security, Police & POLAIR Stop Train Graffiti Vandals with Videofied

**Roden Security is a 24/7 Central Monitoring Station, patrol and security response operation based in South West Sydney**

Roden Security came to the rescue of one of their high profile clients operating a rail yard used to house and maintain trains. This site was constantly target by Graffiti artists and vandals, hitting this site regularly, costing 100's of thousands of dollars each year in responses, repairs and cleaning.

The site was a warehouse type location that was old and very hard to secure externally to keep people out.

I attended a meeting with our client with the help of Videofied staff. We presented the Videofied system and it's capabilities.

Previously we had a standard dialer system in place with dual tech sensors. We would receive numerous alarm activations from site each night of which a Patrol would often attend and find nothing.

A Videofied system was installed before the Christmas break and 10 hours later they had an alarm with video verification in the monitoring station confirming persons on site. Police and guards were deployed, and the vandals were caught 'red handed' spray painting trains. Needless to say the client was extremely happy with the result.

About four months later, our Control Room received another Videofied alarm activation from a Videofied system installed at the rail yard site. Immediately the control room operator, seeing video of the offenders, dispatched our closest mobile guard unit and also called the police. The guard and police response approximately 10 minutes later allowed the police to establish a perimeter cordon at the site. Police responded also with K9 and POLAIR (Helicopter) support, which assisted police to locate and arrest the four offenders onsite.

Our client has been very happy to go back to his boss after each arrest with the information that this system has led to arrests which justifies their investment in the Videofied technologies.
